eBanc Security with MFA

The Internet offers the potential for safe, convenient ways to conduct banking business, any place, any time.

The security of your private information is important to us. To enhance your online security, eBanc features another layer of security commonly referred to as Multifactor Authentication or MFA.

MFA provides additional enhancements to eBanc. The product we have chosen is easy to use and works on your home computer and computers you access away from home.

MFA enhances security by adding an additional layer to the log in authentication process. In addition to your Access ID and Password, you should verify the URL address bar is green and that you have a green padlock with UFS, LLC listed. For unregistered computers (generally those used away from home) you must also correctly answer a challenge question.

MFA is just one example of our efforts to protect your private information; however, the most important tool in protecting your personal information is you!
